

Garden Planner & Tracker — Manual

Everything you need to plan, track, and harvest your garden — all in one offline app.

← [BACK TO THE APP](#)

01 Getting Started

Garden Planner & Tracker is a single file that runs entirely in your browser — no install, no account, no internet connection required.

- 1 Open `garden-planner.html` by double-clicking it, or dragging it into any browser window.
- 2 Use the sidebar on the left to jump between sections — click the  menu button on mobile to open it.
- 3 Everything you type or upload is saved automatically to this browser's local storage as you go.
- 4 The app comes pre-loaded with example entries in every section so you can see how it works — edit or delete them and start adding your own data.

Tip — Because your data lives in this specific browser, export a backup regularly (see [Backup, Import & Export](#)) especially before clearing browser data or switching devices.

Preview mode — Free/preview copies of this file allow a limited number of changes before asking for an activation code. Your purchase includes the activation code — enter it once via the "Activate" link at the bottom of the page to unlock unlimited editing permanently in this browser.

02 Dashboard

Your garden's home base — a quick summary of the season, updated automatically as you log data elsewhere in the app.

Total Harvest

Sum of all quantities logged in Harvest Tracker, in kg.

Total Expenses

Sum of all costs logged in Garden Expenses.

Beds / Rows

Pulled from Season Details, or counted from Garden Layout if left blank.

Tasks To Do

Count of unfinished items in the Garden To-Do List.

Season Details

Fill in the garden year, cultivated area, number of beds/rows, and your goals for the season. Click Save to store your changes.

03 Garden Layout

Map out where everything grows.

Garden Sketch

Upload a photo or drawing of your garden layout with the file picker. It's stored directly in the app — click  Remove Sketch underneath the image to delete it.

Garden Bed Map

A visual, top-down layout of your beds, drawn automatically from the dimensions and crop of each one. Click any tile to jump straight to editing that bed.

Crop Positioning Notes

A free-text box for crop rotation plans, bed orientation, or sun exposure notes. Click Save Notes after editing.

Bed Dimensions

Click **+ Add Bed** to record a bed's name, plot shape, dimensions, planned crop, and an optional photo. Bed names you create here automatically appear as choices in the **Zone** dropdown of the Watering Log.

- 1 Pick a **Plot Shape** — Rectangle or Square.
- 2 Enter **Width** and **Length** in meters — for a square, Length copies Width automatically. The **Dimensions** field fills in on its own.
- 3 These numbers size the bed's tile on the Garden Bed Map, so a long narrow bed actually looks long and narrow.

 **Companion planting check** — Beds are treated as physically next to each other in the order they're listed. If a bed's crop is a bad companion for the crop in the next bed (per your Companion Planting Chart), both beds are flagged in the **Companion Planting Conflicts** list below the table, with a note explaining why.

04 The Garden Log Sections

Ten trackers covering every stage of the growing season. All work the same way:

- 1 Click **+ Add ...** at the top right of the section.
- 2 Fill in the form — fields marked with * are required.
- 3 Click **Save**. Your entry appears instantly in the table.
- 4 Use the  and  icons on any row to edit or delete it.

SECTION	WHAT IT TRACKS
 Seed Inventory	Plant, variety, quantity on hand, supplier, purchase date.
 Planting Schedule	Sowing, transplanting, and estimated harvest dates per crop. Sowing dates earlier than your recorded last frost date are flagged with a  badge. Adding dates here also auto-creates matching tasks in the Garden To-Do List.
 Watering Log	Date, zone/bed (dropdown), amount, and notes.
 Fertilizer Log	Fertilizer type, application date, amount, and results.

SECTION	WHAT IT TRACKS
 Pest & Disease Tracker	Issue, date, treatment applied, and outcome.
 Weather Notes	Temperature, rain, frost, and special weather events.
 Plant Growth Tracker	Plant, date, height, a monthly photo, and observations.
 Harvest Tracker	Crop, harvest date, quantity in kg, and quality rating.
 Produce Valorization	What happened to each harvest: eaten fresh, preserved, sold, given away, or composted — plus value obtained.
 Garden Expenses	Category (seeds/tools/fertilizer/other), description, date, cost.
 Garden Journal	Daily observations, lessons learned, and ideas for next season.

 **Photos** — Any field with an image upload (bed photos, plant growth photos) stores the picture directly inside your saved data, so it travels with your backup file.

05 Yield Summary

The only section that calculates itself.

Yield Summary automatically totals your **Harvest Tracker** quantities against every cost you've logged — **Seed Inventory**, **Fertilizer Log**, and **Garden Expenses** — to show total yield, total cost, and cost per kg, with a breakdown by source. It also pulls in **Produce Valorization** to show actual revenue and profit from anything you've marked as sold, plus a breakdown of where the rest of the harvest went. Enter an estimated **sale price per kg** and click [Recalculate](#) to see a separate projected revenue and profit if you sold your entire harvest at that price.

06 Bonus Pages

Extra reference pages designed to add value to a printed or digital garden planner product.

Companion Planting Chart

Comes preloaded with 6 common plant pairings — add, edit, or delete rows freely.

Frost Dates Tracker

Record last spring frost and first fall frost per location/zone.

Monthly Garden Planner

A note box for each of the 12 months — click outside the box to save automatically.

Seed Starting Tracker

Indoor start date, move-outdoors date, and location per plant.

Harvest Calendar

A read-only monthly view, generated automatically from your Harvest Tracker entries.

Photo Gallery

Every photo from Garden Layout and Plant Growth Tracker in one chronological grid — click any photo to jump to its entry.

Garden To-Do List

Tasks with due dates, priority, and a done checkbox — feeds the Dashboard's open task count. Sow/transplant/harvest tasks from Planting Schedule appear here automatically.

07 Backup, Import & Export

Your data lives in this browser only — these tools are how you keep it safe or move it elsewhere.

- 1 Click  **Export** in the top bar to download a full JSON backup file, named with today's date.
- 2 Store that file somewhere safe (cloud drive, external disk).
- 3 To restore or transfer your data, click  **Import** and choose a previously exported JSON file.

 **Careful** — Importing a backup replaces all current data in the app. Export your current data first if you don't want to lose it.

08 Dark Mode & Printing

Two small buttons, both in the top bar.

 /  toggles dark mode — your preference is remembered for next time.

 **Print** opens your browser's print dialog so you can print any section, or save it as a PDF.

09 Privacy & Data

Nothing you enter ever leaves your device.

Garden Planner & Tracker has no server, no account, and no analytics. All information — including uploaded photos — is stored in this browser's local storage. Clearing your browser's site data for this file will erase everything, so keep regular exports as described above.

10 Tips & FAQ

Can I use this on my phone or tablet?

Yes — the layout adapts to any screen size. On narrow screens, tap the  icon to open the section menu.

Where did the demo entries come from?

Every section ships with a few example rows so you can see the intended format at a glance. Delete them with the  icon whenever you're ready to start fresh.

I accidentally deleted something — can I undo it?

There's no undo, but if you exported a recent backup you can re-import it. Otherwise, deletions are permanent — the app will always ask you to confirm before deleting a row.

Does this sync between my devices?

Not automatically. Export a backup on one device and import it on another to move your data across.

Garden Planner & Tracker v1.0 — plain HTML, CSS and JavaScript. Zero dependencies, zero build step.
